

We are pleased with the acceptance of our manuscript and thank the reviewers for their observations. In response, we have included the following text in the *Methods* section, page 4:

"The results were categorized and analyzed descriptively, with tables used to synthesize the study data based on the PRISMA-ScR flowchart model. In this framework, data analysis and the drafting of the review were conducted using a 27-item checklist organized into seven main domains, in accordance with the criteria proposed by Tricco et al. (2018)."

This addition has been highlighted in yellow in the revised manuscript (R2). Furthermore, we have also included the corresponding reference on page 18, likewise highlighted in yellow:

Tricco, A.C., Lillie, E., Zarin, W., et al. (2018). PRISMA Extension for Scoping Reviews (PRISMA-ScR): Checklist and Explanation. *Annals of Internal Medicine*, 169(7): 467–473.

We confirm that all modifications are color-coded in the revised version, and a separate table of changes has been provided in accordance with the editorial guidelines.

Modifications
